1 Daten-Pipeline

A Lambda-Funktion zur Sammlung der Artikel

A.1 Index.mjs

Die Hauptfunktion, die von der Lambda-Funktion aufgerufen wird.

Listing 1: index.mjs

```
1 import helper from "./helper.mjs";
2 import categories from "./categories.mjs";
3 import S3Uploader from "./s3Helper.mjs";
4
5 export const handler = async (event, context) => {
       const s3Uploader = new S3Uploader();
6
7
       const bucket = "ntv-data";
       const baseKey = helper.getYesterdaysDate().toISOString().split("T")[0];
8
9
       for (let category of categories) {
           let { links, rss } = await
10
              helper.getLinksOfYesterdaysArticelsAndRssObjectOf(category);
           if (links.length == 0) {
11
12
              continue;
13
           }
           let rssKey = baseKey + "/" + category + "/rss.json";
14
           let rssJSONString = JSON.stringify(rss);
15
           await s3Uploader.uploadContent(bucket, rssKey, rssJSONString);
16
           for (let link of links) {
17
18
              let articleKey = baseKey + "/" + category + "/" +
                  helper.getFileNameFromLink(link);
19
              let htmlContent = await helper.downloadContentFrom(link);
              let cleanedHTML = helper.cleanHTMLContent(htmlContent);
20
              await s3Uploader.uploadContent(bucket, articleKey, cleanedHTML);
21
22
           }
23
       }
       return {
24
           statusCode: 200,
25
           body: JSON.stringify("Done!"),
26
27
       };
28 };
```

A.2 Categories.mjs

Die verschiedenen NTV-Kategorien, die abgerufen werden sollen.

Listing 2: categories.mjs

```
export default [
 1
 2
       "dasbeste",
       "politik",
 3
 4
       "politik/US-wahl-2024",
       "wirtschaft",
 5
 6
       "boersenkurse",
 7
       "sport",
 8
       "panorama",
       "leute",
9
       "technik",
10
       "ratgeber",
11
12
       "wissen",
13
       "auto",
       "infografik",
14
       "regionales",
15
       "der_tag/alle_tage",
16
17
       "meinung",
18];
```

A.3 S3Helper.mjs

Funktionen zum Zugriff auf die entsprechenden AWS S3-Buckets.

Listing 3: s3Helper.mjs

```
import { S3Client, PutObjectCommand } from "@aws-sdk/client-s3";
 2
 3
   export default class S3Uploader {
 4
       constructor() {
           this.s3Client = new S3Client({ region: "eu-central-1" });
 5
 6
       }
 7
8
       async uploadContent(bucket, key, contentString) {
9
           const command = new PutObjectCommand({
10
              Bucket: bucket,
11
              Key: key,
12
              Body: contentString,
13
           });
14
15
           try {
              console.log("Uploading", bucket + "/" + key, "...");
16
               const response = await this.s3Client.send(command);
17
18
               console.log("Finished!");
           } catch (err) {
19
              console.log(err);
20
21
           }
22
       }
23 }
```

A.4 Helper.mjs

Hilfsfunktionen zum Verarbeiten der von NTV empfangenen Daten.

Listing 4: helper.mjs

```
import { XMLParser } from "fast-xml-parser";
2
3
   function buildRSSLinkFromCategory(category) {
       let domain = "https://www.n-tv.de/";
4
       let postfix = "/rss";
5
6
       return domain + category + postfix;
7
   }
8
   function getYesterdaysDate() {
9
10
       const date = new Date();
       date.setHours(date.getHours() + 2);
11
12
       date.setDate(date.getDate() - 1);
13
       return date;
14 }
15
   function dateWasYesterday(datestring) {
16
17
       const yesterdaysDate = getYesterdaysDate();
18
       const parsedDate = new Date(datestring);
19
       return (
20
           yesterdaysDate.getFullYear() == parsedDate.getFullYear() &&
21
           yesterdaysDate.getMonth() == parsedDate.getMonth() &&
22
           yesterdaysDate.getDate() == parsedDate.getDate()
23
       );
24 }
25
26
   function parseXMLString(xmlstring) {
27
       const parser = new XMLParser();
       return parser.parse(xmlstring);
28
29 }
30
   function getRssItemsOfYesterday(rssObject) {
31
32
       if (rssObject.rss.channel.item == undefined) {
33
           return [];
34
35
       let items = rssObject.rss.channel.item;
36
       return items.filter((item) => dateWasYesterday(item.pubDate));
37 }
38
```

```
async function downloadRssXMLOfCategory(category) {
39
40
       let url = buildRSSLinkFromCategory(category);
41
       return await downloadContentFrom(url);
42 }
43
44
